

Restore CalciCare

Alginate Dressings

- A sterile absorptive dressing made from Calcium Sodium Alginate for use on highly exudating wounds
- Do not tease the rope or “fluff” it as this will reduce wet integrity
- Use a secondary dressing to hold in place, eg. film/pad
- Change every 1-3 days depending on level of exudate
- Use only the amount required to contact all wound surfaces - **DO NOT OVERPACK**
