

Medicare's Usual Maximum Quantity for Ostomy Supplies

The quantity of ostomy supplies needed by a patient is determined to a great extent by the type of ostomy, its location, its construction, and the condition of the skin surface surrounding the stoma. There will be variation according to individual patient need and their needs may vary over time. The table below lists the maximum number of items/units of service that are usually medically necessary. The actual quantity needed for a particular patient may be more or less than the amount listed depending on the factors that affect the frequency of barrier and pouch change. The medical necessity for use of a greater quantity of supplies than the amounts listed must be clearly documented in the patient's medical record.
