Critical Care
Our Family of **Anchor**Fast Oral Endotracheal Tube Fasteners

Every patient dependent on a ventilator for respiration is vulnerable. Intubated individuals face many risks, and in particular, ventilator-associated events, which can result in longer lengths of stay and increased hospital costs. AnchorFast oral endotracheal tube fasteners combine a number of features that provide critical-care clinicians ease of access to the oral cavity while securing tubes in intubated individuals. AnchorFast oral endotracheal tube fasteners are used in thousands of hospitals around the world; at Hollister, customer feedback drives ongoing innovation, and our product line is continuing to evolve to meet your needs.

**Anchor**Fast Oral Endotracheal Tube Fastener

- **Nonabsorbent upper lip stabilizer** designed to help keep the track from contacting the face.
- **Adjustable neck strap** helps provide extra security and is replaceable.
- **Skin barrier pads** fasten the device firmly in place. The unique pad formulation is designed to be gentle on skin and easy to apply.
- **ET tube wrap with one-click security clamp** locks the ET tube in place. One click releases the clamp for easy tube repositioning.
- **Gliding tube shuttle** allows easy side-to-side repositioning of the ET tube for oral care, while the tube remains secure.

Help address intubated patient risks with confidence and offer the right combination of features for your patient’s needs with AnchorFast oral endotracheal tube fasteners.
**AnchorFast SlimFit**
Oral Endotracheal Tube Fastener

- Designed to accommodate smaller faces

**AnchorFast Guard**
Oral Endotracheal Tube Fastener

- Helps prevent tube occlusion from interfering with care

**AnchorFast Guard Select**
Oral Endotracheal Tube Fastener

- Accommodates standard ET tubes and ET tubes with subglottic suctioning

---

**Two-piece adjustable neck strap**
designed for secondary adjustment at an accessible area on the patient’s head

**Gray track** that differentiates from other AnchorFast products

**Thumb pad** with increased surface area for finger or thumb placement when opening

**Integrated tube protection sleeve**
helps prevent occlusion without interfering with routine care. Unlike separate bite blocks, it’s there before it’s needed.

**Modified tube protection sleeve**
secures both standard ET tubes from 5.0 to 9.0 mm inner diameter and ET tubes with subglottic suction lumen from 6.0 to 8.0 mm inner diameter.
