Remove Used Pouching System

Clean and Dry Skin

Prepare the Skin Barrier and Pouch

Apply the New Pouching System

 OSTOMY CARE TIPS

Pouchkins One-Piece Pouching System

1. Close bottom of pouch. If using a drainable pouch, close the Lock 'n Roll microseal closure at the bottom of the pouch. Fold up three times until the plastic fasteners meet. Press firmly from the center to the outer edges along the closure strip.

2. Clean the skin with water or with gentle soap as recommended by your healthcare professional. Rinse and dry thoroughly. Do not use oils, powder, lotion, or lotion-type soaps on the skin.

3. Measure the stoma using a stoma measuring guide before every barrier application.

4. Trace the determined barrier size opening onto the skin barrier. The skin barrier should fit where the skin and stoma meet. Verify that no skin is showing between the skin barrier and the stoma to help prevent leakage and skin irritation.

5. Pull the pouch film away from the skin barrier. Using small curved scissors, carefully cut an opening in the skin barrier to match the pattern. Do not cut beyond the line on the release liner. Do not puncture the pouch.

6. Remove the release liner from the skin barrier. Set aside with adhesive facing up.

7. Center the skin barrier opening over the stoma.

8. Apply gentle pressure to the skin barrier for about a minute for best adhesion.

9. If using a urostomy pouch, close spout at bottom of pouch.
OSTOMY CARE TIPS

Pouchkins One-Piece Pouching System

Using Accessories (As recommended by your healthcare professional)

Paste may be applied to the skin barrier before application.

Rings can be used to fill in skin areas near the stoma as a substitute for paste.

You may use stoma powder when the skin is eroded and moist.

Tips

The skin around the stoma should not be irritated or broken. If the skin is irritated, contact a WOC/ET Nurse or ostomy specialist.

The Pouchkins stickers (included in each box) can be placed on the pouch to identify the date and time the pouch was changed.
