Remove Used Pouching System

Clean and Dry Skin

Prepare the Skin Barrier and Pouch

Apply the New Pouching System

Trace the determined barrier size opening onto the skin barrier. The skin barrier should fit where the skin and stoma meet. Verify that no skin is showing between the skin barrier and the stoma to help prevent leakage and skin irritation.

Apply gentle pressure to the skin barrier for about a minute for best adhesion.

Attach the pouch to the skin barrier by engaging the lower edges of the pouch flange and the skin barrier flange. Press the two flanges together. A series of “clicks” will confirm you are doing it correctly. No more “clicks” means the pouch is secured.

If using a urostomy pouch, make sure the drain valve is closed. The teardrop on the drain valve should face the body side of the pouch. If desired, apply the cap provided in the box.

Center the skin barrier opening over the stoma in a diamond shape.

For tape bordered barriers, remove the backing paper on both sides and press adhesive against the skin.

Measure the stoma using a stoma measuring guide before every barrier application (if using a pre-sized barrier opening, go to step 6).

Remove the release liner from the skin barrier.

Remove the release liner from the skin barrier. Properly dispose of used pouch and skin barrier. Do not flush down toilet.

Clean the skin with water or with gentle soap as recommended by your healthcare professional. Rinse and dry thoroughly. Do not use oils, powder, lotion, or lotion-type soaps on the skin.

Trace the determined barrier size opening onto the skin barrier. The skin barrier should fit where the skin and stoma meet. Verify that no skin is showing between the skin barrier and the stoma to help prevent leakage and skin irritation.

Using small curved scissors, carefully cut an opening in the skin barrier to match the pattern. Do not cut beyond the line on the release liner.

Carefully lift an edge of the adhesive and peel downward, gently pushing the skin away from the skin barrier. Properly dispose of used pouch and skin barrier. Do not flush down toilet.

Gather pouch, skin barrier, disposal bag, tissue and/or cloth for cleaning, and water. Optional: scissors, pen, measuring guide, and/or accessories.
### TIPS

- If using a barrier ring or paste, apply it to the sticky side of the skin barrier next to the stoma opening as directed.
- The skin around your stoma should not show any signs of rash or sores.
- Irritated skin should be evaluated by a healthcare professional.
- Your stoma will probably be swollen after surgery. It may take several weeks or months for the stoma to shrink to its permanent size.
- The stoma may bleed slightly when you clean it.
- The use of skin protective wipes are not recommended under extended wear skin barriers as they may decrease wear time.
